

Adjustment/Setting Quick Reference

STEP 1

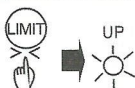

Door should be in closed position. On first startup memory is blank (No preset limits).

STEP 2

Connect power cord, light is on and flashes 5 times.

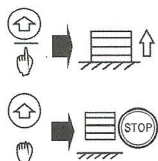

If limits are in memory, light flashes 3 times.

STEP 3

Press "LIMIT" button to enter limit-setting mode. UP LED is on.

To quit, press & hold "LIMIT" button till LED off.

STEP 4 — Setting UP limit

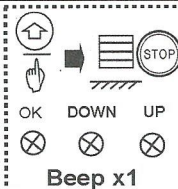

Press & hold the "UP" button. Door travels up. When the door reaches the desired up limit position, release the "UP" button.

Door stops.

Attention for STEP 4 !

Over-load

During setting UP limit, if the opener detects extra loading caused by door binds, sticks or is out of balance, a beep is heard with all LEDs are off and the door stops.

Beep x1

Caution

This is a warning sign that door-check or repair is needed. You may still continue setting the Up limit by repeating STEP3. After setting is done, the opener then operates in **Over-Drive Mode**, which Soft Open/Close feature is disabled.

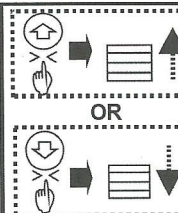

Dead-load

If extra-loading is detected to be hazardous, both UP/DOWN LEDs lit and door stops during setting UP limit. For your safety and prevent damage to opener, follow steps below :

1. Follow Step 8 to set Down limit until the door in close position.
2. Disconnect door from opener by using Emergency knob.
3. Call a qualified service person.

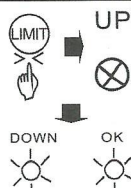

Warning

STEP 5 UP Limit Fine-Tuning
